ПОЛТАВСЬКИЙ ДЕРЖАВНИЙ АГРАРНИЙ УНІВЕРСИТЕТ

The system can identify ground targets and classify them in real time, is able to determine the coordinates of the target, integrate with the target guidance system and partially navigate through the optical channel with non-working GPS

The drone is equipped with thermographic bispectral positioning system.

Fields of application:

Military: “Providing troops with intelligence information on the detection of ground targets.”

Civil: “Monitoring and determination of the state of mobile objects in the logistics sphere.”
